

## ULMA Form Works, Inc. presents its latest products and systems at the recent WOC trade fair in Las Vegas

---

This event was held at the Las Vegas Convention Center and was attended by a huge number of professionals from the construction sector. The four day exhibition covered over 880,000 square feet and featured 1,700 companies exhibiting their latest construction products and systems.

As at previous trade fairs, **ULMA Form Works, Inc.** was present at this international event. The company increased the size of its booth compared to previous years, and presented a wide range of products: including T-60, MEGAFORM and MEGALITE vertical formwork, which are compatible with the ENKOFORM V-100 beam system and the BIRA circular steel formwork. The CC-4 horizontal formwork, together with the ALUPROP, received the most attention as a result of its light weight and ease of assembly and dismantling.

One highlight of the range displayed at the trade fair was the latest concrete vertical formwork, MEGALITE. A panel with a width of over 36 inches, which is compatible with all other measurements, has been added to the wide range of panel widths already available.

**ULMA Form Works, Inc** was located on stand C7217, in an area with a constant stream of visitors and in direct contact with other international competitors from over 120 nationalities. The size and comfort of this space, and the facilities designed for this event, encouraged meetings with manufacturers, architects, contractors and engineers, and many others.

After four days of intensive business, and despite there being fewer visitors to the trade fair than in previous years, **ULMA Form Works, Inc** not only had more visitors to its stand, but also contracted new projects and expanded its client portfolio; these were all key areas in its 2009 business plan. The next trade fair is already planned: February 2 to 5, 2010.
